
NUCAMP FULL STACK WEB DEVELOPMENT

Portfolio Project

Prepared for: Dave Hanby, President
Prepared by: Wesley Brown, Web Developer
November 5, 2021
Proposal number: 123-4567

PROJECT SUMMARY

Objective

To build a responsive, mobile-first website for Skyline Equipment Sales, Inc.

Goals

To create a more user-friendly experience for HVAC contractors to evaluate the company while also giving the company more leads through acquiring contact information.

Expected List of Features

- A introduction page with the company logo and mission statement of the company
- An about us page that gives a more detailed description of the company and its business practice.
- A product page which gives a description of what products and services the company provides.
- A contact page which provides a form for customers to provide contact information and request a quote for their construction proposals. Also, it gives the contact information and map directory through Apple Maps for the company.

Survey: Compare/Contrast

While researching other websites of similar objectives

- Most to all had contact listings and a request a quote button.
 - None had a video mission statement from the company which I hope to provide.
 - Most were web responsive, though I would like to provide a cleaner web experience by better alignment and spacing through Bootstrap
-
